### LOW SURFACE ENERGY MATERIALS DOUBLE-SIDED FOAM TAPE SYSTEM

PRODUCT:	LSEFT G40		
	Provide long-term bonds for outdoor and weathering exposures to low surface energy (LSE) materials and finishes. A high mass 3.5 mils per side acrylic LSE adhesive is engineered for bonds to glass, ceramics, primed, painted aluminum, PVDF coated aluminum and other LSE plastic surfaces without silane / isopropanol pre-treatment.		
PRIMARY USE:	The double-coated cross linked closed cell polyethylene acrylic tape was engineered specifically for LSE surfaces, resistance to common environmental conditions, air, water, detergents, moisture, light and dust penetration. The gray foam fills any irregularities and functionally provides cushioning, absorbs vibration and shock, and allows for expansion and contraction of dissimilar materials due to temperature variations. See associated sheets for specific testing and performance data. Use in exterior signage, solar, and mounting LSE materials and surfaces in weathering applications.		
DESCRIPTION:	A gray cross linked polyethylene foam coated on both sides with a high mass, high performance LSE specific acrylic adhesive system developed for extreme environmental exposures that does not require silane / isopropanol pre-treatment for adhesion to LSE materials and finishes, glass or ceramic surfaces.		
LINER:	74lb bleached paper liner		
	Thickness	LSEFT G40	.040
TYPICAL PHYSICAL PROPERTIES:		Liner (nominal)	5.5 mils
		See Attached Data	
	Peel Adhesion	NOTE: Peel tests are performed as per PSTC 101, In general, for acrylic adhesives, longer residence time yields much higher peel values.	
	Shear Adhesion	See Attached Data

### TECHNICAL BULLETIN LOW SURFACE ENERGY MATERIALS DOUBLE SIDED FOAM TAPE SYSTEM

PRODUCT FEATURES:	Excellent weathering Excellent water and detergent resistance.  No Silane / isopropyl pre-wash required.  High Mass Acrylic adhesive system developed for LSE surfaces Designed for extreme environmental applications.  Excellent UV resistance.  Excellent quick stick.  High shear and cleavage strength.  Bonds well to irregular surfaces.
SERVICE TEMPERATURE:	-30° F. to 220° F.  NOTE: This information is provided as a means to help characterize the adhesive's temperature resistance. Note that this data is based on limited testing and under no load. The practical service temperature of this or any adhesive system is dependent on many variables including the substrates being bonded, environmental conditions, and the loading and method of application. The purchaser is responsible for determining the suitability of this or any product for their particular purpose and process. The recommended application temperature is 68°F to 100°F.
NOTES:	Surfaces to be bonded should be dry, clean and free from grease and oil. Products should not be laminated to any material that contains migrating plasticizer.
SHELF LIFE:	One year from date of shipment when stored under cool, dry conditions.

Data presented are typical properties taken from a limited number of production runs and should not be used for specification purposes. Adchem Corporation makes no warranty, expressed or implied, and specifically disclaims and disavows any implied warranty of merchantability and of fitness for a particular purpose.
